WHAT IS IPUMS?

IPUMS provides census and survey data from around the world integrated across time and space. IPUMS integration and documentation makes it easy to study change, conduct comparative research, merge information across data types, and analyze individuals within family and community context. Data and services available free of charge.

ANALYSIS-READY TABLES FROM INTERNATIONAL CENSUSES

The **International Historical Geographic Information System** (IHGIS) provides data tables from population and housing censuses as well as agricultural censuses from around the world, along with corresponding GIS boundary files. Data from diverse published documents are provided in a standardized, ready-to-use structure with thorough, consistently formatted metadata.

IPUMS.ORG

GEOGRAPHY CROSSWALKS TO IPUMS INTERNATIONAL CENSUS MICRODATA

Census-DHS: First Administrative Level of Geography

The spatially consistent variables at the primary level of geography within countries allow researchers to summarize subnational census data from IPUMS International and attach them as contextual information to IPUMS DHS samples, or to summarize DHS data to censuses.

Census-DHS: Second Administrative Level of Geography

Sample clusters from [The DHS Program](#) are assigned to second level administrative level of subnational geography in [IPUMS International](#), allowing researchers to summarize lower-level census data and attach them as contextual variables to IPUMS DHS samples.

GEOGRAPHY CROSSWALKS TO IHGIS AGGREGATE CENSUS DATA

Aggregate Census-DHS: Subnational Level of Geography

Sample clusters from [The DHS Program](#) are assigned to administrative levels of subnational geography in [IHGIS](#), allowing researchers to attach aggregate census data as contextual variables to IPUMS DHS samples. We have written a [user note with the IHGIS team](#) describing the process of creating these linking variables.

CENSUS TABLES-TO-DHS GEOGRAPHY CROSSWALKS: IHGIS AGGREGATE DATA

- [Computation](#)
- [Using census-to-DHS crosswalk variables for research](#)
- [Downloading census-to-DHS crosswalk variables \(extract system\)](#)
- [Downloading census-to-DHS crosswalks \(CSV files\)](#)

DOWNLOADING CENSUS-TO-DHS CROSSWALKS (CSV FILES)

The table below lists the downloadable crosswalks between the DHS sample and IHGIS geography codes. Each crosswalk file contains the DHSID codes for a DHS sample and corresponding IHGIS codes you can use to link to a tabulation geography from an IHGIS dataset. If the buffer crosses boundaries of two or more geographic units, we list each unit along with its placement probability index (i.e., the probability that the cluster falls within that unit). The placement probabilities across all units for each cluster point sum to 1.

OVERVIEW

IHGIS provides shapefiles to describe the boundaries of administrative and statistical units represented in IHGIS data files. By linking the data tables to the boundary files, you can map the characteristics in the data tables.
